Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-18 are directed to a register with clock signal coupled to said internal strobe signal and with input lines coupled to data signals from said host controller; wherein said first and second signals are coupled to said peripheral and wherein all four states of said first and second signals are utilized by said peripheral; wherein said host controller is configured to prevent a direct transition from said first state to said second state when changing the state as necessary to perform input or output on said peripheral; and wherein said direct transition from to perform output to of said first and second signals host controller is configured to generate a said first state to said second state said register.

Species 2, claims 19-31 are directed to a buffer with enable signals coupled to said internal enable signal and with data output lines coupled to data signals from said host controller; wherein said first and second signals are coupled to said peripheral and wherein all four states of said first and second signals are utilized by said peripheral; wherein said host controller is configured to prevent a direct transition from said first state to said second state when changing the state of said first and second signals as necessary to perform input or output on said

peripheral; and wherein said host controller is configured to generate a direct transition from said first state to said second state, and to generate a direct transition from said second state to said third state to perform input from said buffer.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 5809.02(a).

Should applicant traverse on the ground that the species are not patentability distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
